

***Setting new standards for fast,
efficient auto crushing.***

BIG MAC QS FLATTENER

***Quick setups. Quick teardowns.
Quickly gain a competitive edge.***

MAC
Crushers & Loggers
By Granutech - Saturn Systems

The new Big MAC QS provides quick setups and teardowns – and a wealth of other benefits – to auto recyclers.

It stands to reason that the only auto crusher that could take the place of the Big MAC Flattener would be another Big MAC. Introducing the Big MAC QS from MAC/Granutech-Saturn Systems, a flattener with one of the quickest and easiest setups in the industry. A fully-automated hydraulic system raises the cylinder to its upright working position, then also locks the trunnion in place, making the QS operational. For teardown, the fully-automated process is reversed, lowering to a legal travel height. The entire setup or tear down process can be done by one person in less than a minute. But we didn't stop there. A combination of our own design reviews and input from our extensive list of Big MAC owners led to the enhancements spotlighted below.

The Setup

00:00 — QS at rest

00:10 — Cylinders moving into place

00:27 — QS with cylinders locked

The result: 00:42 — QS lid fully open, 42-second setup!

In making these changes, we also kept in mind what's important to you. As a result, we still maintain both our 90-inch opening and our legal weight. Let the Big MAC QS get you up and running faster than ever before.
